Top Skills

Platform Architecture
forward deployed engineer
Site Reliability Engineering

Certifications

MTA: Introduction to Programming
Using Python - Certified 2019
Docker For Absolute Beginners -
Hands On
MTA: HTML5 Application
Development Fundamentals -
Certified 2019

Honors-Awards

INCUBATE IND : Cloud Titans -
Developer Tech Camp
Google Cloud Dev Jam: Application
Development
Marigold Global Hackathon

Ankit Pramanik

DevOps | Platform Engineer | AI-Powered DevOps | AI Ops &
Agentic AI in Production | Forward Deployed Engineering | Exploring
Agentic AI & FDE Roles | 5+ YOY
Hyderabad, Telangana, India

Summary

I'm a results-driven DevOps | SRE | DevSecOps Engineer with 5+ years of experience delivering secure, scalable, and automated cloud infrastructure across AWS, GCP, and Microsoft Azure — and, more recently, deploying Agentic AI applications and AI-powered automation into production. At CES Information Technologies, I lead DevOps and AI-integrated CI/CD initiatives — including embedding OpenAI Codex directly into GitHub Actions and building a GitOps pipeline driven dynamically by user input — while continuing to specialize in designing and automating CI/CD pipelines using Jenkins, GitLab CI, GitHub Actions, and Azure DevOps, with cloud-native DevSecOps compliance built in from the start. Previously, at Persistent Systems and Razor Group, I led mission-critical DevOps projects that improved delivery pipelines, reduced downtime, and drove infrastructure-as-code adoption across enterprise teams. # I bring end-to-end expertise across:

- CI/CD automation
- Kubernetes & container orchestration (EKS, GKE, AKS)
- IaC with Terraform, CloudFormation & Helm
- Cloud monitoring and alerting (Prometheus, CloudWatch, Grafana, ELK)
- DevSecOps integration with tools like Trivy, SonarQube, and IAM policies
- Agentic AI & AI Ops — LangChain, Model Context Protocol (MCP), OpenAI Codex, LLM-powered automation
- Scripting and automation using Python, Bash, and Linux fundamentals

Highlights:

- Reduced deployment time by 60% and cut release failures by 35% through CI/CD optimization
- Drove FinOps initiatives across 25+ AWS accounts, cutting annual cloud spend by up to 20%
- Architected an AI-powered CI/CD pipeline integrating OpenAI Codex into GitHub Actions for automated code review and generation
- Built a complete GitOps pipeline from scratch, driven dynamically by user input
- Cut Docker image size by ~80% using multi-stage builds
- Delivered 7+ enterprise projects, recognized as Top Talent FY-23 and 1st Runner-up at Marigold Global Hackathon (2025)
- Integrated container and pipeline

security early in SDLC for proactive risk mitigation I'm passionate about driving automation-first cultures, bridging the gap between development, operations, and AI — and getting agentic AI systems out of notebooks and into real, secure, production environments at scale. Open to DevOps, AI Ops, AI Deployment Engineer, and Forward Deployed Engineering opportunities where I can scale cloud platforms, automate everything, and bring AI safely into production. Let's connect and build something impactful together!

Experience

CES

Senior Site Reliability Engineer

January 2026 - Present (8 months)

Remote

- Spearheaded the implementation of robust infrastructure solutions to enhance system reliability, scalability, and operational performance.
- Maintained enterprise security standards by embedding DevSecOps practices into CI/CD pipelines, ensuring compliance, vulnerability management, and risk mitigation.
- Deployed and managed multiple Kubernetes workloads on Amazon EKS, optimizing resource utilization, scalability, and high availability across production environments.
- Architected and implemented AI-powered developer tooling using FastAPI, OpenAI APIs, GitHub Actions, Docker, and AWS, automating documentation generation, code reviews, and deployment assistance to improve engineering productivity.
- Designed and integrated LLM-powered CI/CD workflows, enabling automated pull request reviews, deployment summaries, and engineering documentation while reducing manual effort and improving release visibility.
- Built and deployed production-ready AI applications using Next.js, FastAPI, Docker, AWS, and OpenAI-compatible APIs, implementing secure authentication, streaming responses, and scalable backend architectures.
- Developed reusable infrastructure modules and deployment workflows using Terraform, Docker, GitHub Actions, and AWS, standardizing AI application deployments across environments and reducing deployment complexity.

- Evaluated and integrated multiple LLM providers including OpenAI, OpenRouter, Gemini, Groq, and open-source models, optimizing AI workloads based on latency, cost efficiency, and model performance for different use cases.

Razor Group

Developer Platform Engineer

October 2025 - January 2026 (4 months)

Hyderabad, Telangana, India

As a Developer Platform Engineer at Razor Group, I have been actively involved in deploying, and managing scalable DevOps solutions that support critical enterprise applications. My work primarily focuses on infrastructure automation, CI/CD pipelines, FinOps and cloud-native architectures.

Key Responsibilities:

- Developed and maintained Infrastructure as Code (IaC) using Terraform for provisioning and managing AWS resources.
- Built robust CI/CD pipelines using GitHub Actions enabling automated testing, integration, and deployment workflows.
- Managed and deployed containerized applications using Kubernetes (EKS), ECS in production environments.
- Worked extensively on AWS services (EC2, S3, IAM, VPC, CloudWatch, Lambda, etc.) for hosting and monitoring scalable cloud solutions.
- Collaborated with cross-functional teams to ensure secure, reliable, and efficient system delivery across development and production environments.
- Actively monitoring and reducing the total cloud infrastructure cost along with maintaining 20+ AWS Accounts
- Followed industry best practices for DevOps, site reliability, and cloud security.

Persistent Systems

4 years 3 months

Lead Software Engineer (DevOps)

January 2025 - October 2025 (10 months)

Pune, Maharashtra, India

- > Writing Terraform and CloudFormation scripts for Infrastructure as a Code, automating the cloud infrastructure provisioning across AWS and GCP, and minimizing manual configurations by 40%
- > Proactively monitoring and assessing third-party dependencies, including tools like Kafka, to ensure they are up-to-date and free from security

vulnerabilities. Conducting regular audits to identify potential risks, applying necessary upgrades, and mitigating security flaws to maintain system integrity and compliance.

-> Designing and implementing CI/CD pipelines using Jenkins, GitLab CI, and GitHub Actions to enable seamless code integration, testing, and deployment processes, improving deployment frequency and reducing errors.

-> Integrated SonarQube for code quality and coverage, and Trivy for container image vulnerability scanning, ensuring secure and high-quality application delivery using industry best practices and aligning with DevSecOps principles.

-> Reduced docker image size by up to 80% using multi stage docker build.

-> Migrated 1Tb of code from subversion to gitlab, automated the whole process using shell script automating 90% of the tasks and saving time.

-> Identified and remediated application vulnerabilities as part of DevSecOps best practices using security tools like and Trivy, ensuring compliance and enhancing system security.

-> Monitoring and troubleshooting infrastructure, build failures, and deployment issues to ensure high availability and performance.

Senior Software Engineer

July 2023 - December 2024 (1 year 6 months)

Pune, Maharashtra, India

1. Integrated AWS Cloudwatch monitoring with alarms and triggers over AWS EC2 & Loadbalancers to dynamically serve and troubleshoot in case of traffic spike or system failure
2. Setting up monitoring and dashboards for applications using AWS cloudwatch
3. Working towards security best practises for deploying application up in the cloud
4. Migrating >1TB codebase from subversion to Gitlab using Script saving Time

Software Engineer - DevOps

August 2021 - June 2023 (1 year 11 months)

Pune, Maharashtra, India

1. Working on with Docker & Kubernetes to deploy and manage applications over GCP
2. Deploying and managing data engineering pipelines written for AWS Lambdas using Terraform
3. Working with Terraform workspace to create & manage infrastructure
4. Managing multiple environments dev, qa, release & prod

5. Deploying the product promo-nextgen from scratch to prod
6. Automating Database seeding through gitlab-CI
7. Managing secrets over 1Password

Certifications:

Google Cloud Certified - Professional Cloud Architect
Google Cloud Certified - Professional Cloud DevOps Engineer
Google Cloud Certified - Associate Cloud Engineer
Google Cloud Certified - Cloud Digital Leader
Hashicorp Certified - Terraform Associate

MediaAgility - Part of Persistent Systems

9 months

Software Engineer

April 2022 - April 2022 (1 month)

Pune, Maharashtra, India

1. Working on with Docker & Kubernetes to deploy and manage applications over GCP

Asst. Software Engineer

January 2022 - March 2022 (3 months)

Pune, Maharashtra, India

1. Working with Dataflow writing and upgrading Existing Dataflow Pipelines
2. Working on DataFlow Test Cases using JUnit
3. As a part of Infrastructure team, creating the ETL Infrastructure (Dataflow job, Pub/Sub Topix, GCS Bucket, VPC, Subnet etc) using Terraform Scripts
4. Working with CI/CD Pipelines of client working actively with weekly and monthly Production pipelines

Software Trainee

August 2021 - January 2022 (6 months)

Pune, Maharashtra, India

Will be working on as a DevOps Engineer & Also working in Data Engineering

Education

RCC Institute of Information Technology

Bachelor of Technology - BTech, Information Technology · (August 2017 - July 2021)
