

ANKIT PRAMANIK

DevOps Engineer | AI-Powered DevOps & Agentic AI

pramanik.85849@gmail.com | 9804019155 | Hyderabad, India | [LinkedIn](#) | [GitHub](#)

SUMMARY

DevOps Engineer with 5+ years of experience architecting reliable, secure, and scalable cloud infrastructure across AWS and GCP — designing Kubernetes platforms, CI/CD pipelines, and DevSecOps workflows, with a strong focus on automation, observability, and operational excellence. Specializing in AI DevOps: building and deploying production-grade agentic AI systems on AWS Bedrock and Bedrock AgentCore, integrating OpenAI Codex and Claude Code into CI/CD pipelines, and engineering multi-agent orchestration with enterprise-grade security guardrails. Passionate about applying AI to accelerate software delivery, automate cloud operations, and build resilient infrastructure that bridges DevOps and autonomous systems.

SKILLS

Cloud — AWS (EC2, Lambda, API Gateway, CloudFront, S3, VPC, CloudWatch, EventBridge, EKS, IAM, Bedrock), GCP (GKE, Compute, IAM, VPC, Artifact Registry, Pub/Sub, Cloud Logging & Monitoring)

CI/CD — GitHub Actions, GitLab CI, Jenkins

Infrastructure as Code — Terraform, AWS CloudFormation

Containers & Orchestration — Docker (multi-stage builds), Kubernetes (EKS, GKE), AWS Lambda Web Adapter

DevSecOps — Application Security, SAST, Cloud Security, Trivy, HoruSec, JWT Authentication (Clerk), Pydantic Validation

Scripting — Python, Bash

Monitoring — Prometheus, Grafana, AWS CloudWatch, Icinga

Other — Git (GitHub, GitLab), Networking (VPC, Subnets, NAT, Firewalls), Linux, Team Management

Agentic AI / Generative AI — Amazon Bedrock, Bedrock AgentCore, Strands Agents, Foundation Model Integration, LLM Application Development, Agentic AI Workflows & Multi-Agent Orchestration, Prompt Engineering & AI Guardrails, OpenAI Codex, Claude Code, Sim.ai, AI API Integration

PROFESSIONAL EXPERIENCE

Senior Software Engineer (DevOps) — CES Information Technologies

2026/01 - Present

Hyderabad, India

- Led the design and implementation of a staging environment that enabled scalable infrastructure provisioning and standardized deployment practices across production workloads.
- Built and optimized AI-powered CI/CD pipelines using GitHub Actions across 5+ products, integrating OpenAI Codex for automated code review, deployment summary generation, and workflow automation — resulting in faster, more reliable software delivery.
- Drove FinOps initiatives across 25+ AWS accounts, implementing cost optimization and resource right-sizing strategies that resulted in up to a 20% reduction in annual cloud spend.
- Developed a modular Terraform-based infrastructure architecture, creating reusable modules for application infrastructure provisioning.
- Built a DevSecOps AI agent using Sim.ai to automate code testing, security scanning, and application protection by integrating security tools into engineering workflows.
- Containerized and deployed a FastAPI application integrated with Amazon Bedrock on Kubernetes, enabling scalable, production-ready AI inference capabilities on AWS.
- Designed and built a complete GitOps pipeline from scratch, driven dynamically by user inputs, to enable self-service infrastructure provisioning and deployment.

Developer Platform Engineer — Razor Group

2025/10 - 2026/01

Hyderabad

- Designed and provisioned scalable cloud infrastructure across AWS and GCP using Terraform and CloudFormation, reducing manual setup effort by ~40% and establishing consistent Infrastructure-as-Code standards.
- Deployed and operated data engineering workloads on Amazon EKS and ECS, supporting reliable and scalable containerized processing environments.
- Partnered closely with engineering, security, and product teams to deliver secure, optimized, and stable platforms across development and production environments.
- Embedded DevSecOps, reliability, and cloud security best practices into platform workflows, strengthening overall infrastructure resilience.
- Identified and remediated 30+ critical-severity vulnerabilities across multiple services by integrating security controls into CI/CD pipelines and cloud configurations.
- Created and maintained infrastructure documentation and operational SOPs, improving onboarding efficiency by ~25% and standardizing day-to-day platform operations.

Lead Software Engineer (DevOps) — Persistent Systems

2021/08 – 2025/10

Kolkata, India

- Designed and implemented CI/CD pipelines using Jenkins, GitLab CI, and GitHub Actions, which shortened deployment time by 60% and decreased release failures by 35% through automated validations and rollback mechanisms.
- Optimized Docker images through multi-stage builds, reducing image size by approximately 80%, which significantly improved deployment times and container security across Kubernetes clusters (EKS/GKE).
- Managed and deployed containerized workloads on Kubernetes (EKS and GKE), achieving a 30% drop in compute resource usage while maintaining high service uptime with zero-downtime deployment strategies.
- Configured monitoring and alerting in AWS CloudWatch & Icinga, helping reduce average incident response time by 40% and increasing overall platform reliability.
- Developed Bash and Shell scripts to automate repetitive operational tasks, boosting platform efficiency by approximately 70% and freeing up engineering hours for critical issues.
- Led the implementation of DevSecOps practices using HoruSec and Trivy, which reduced code quality issues and security flaws by 45%, while accelerating the security feedback loop by 70%.

PROJECTS

AI Digital Twin with Stateful Memory

- Engineered a full-stack AI Digital Twin with stateful, S3-backed conversation memory, a Next.js App Router frontend, and a FastAPI backend deployed serverlessly on AWS Lambda, API Gateway, and CloudFront.

AgentGuard — Autonomous Multi-Agent Orchestrator with Permission Guardrails

- Designed containerized microservices using Docker multi-stage builds and the AWS Lambda Web Adapter, enabling Server-Sent Event (SSE) response streaming with zero infrastructure idle cost.
- Implemented enterprise-grade security with Clerk JWT authentication, Pydantic data validation, and automated prompt guardrails against jailbreaking and hallucination.

AWS Bedrock Autonomous Task Looper

- Built autonomous multi-agent assistants on AWS Bedrock AgentCore using Strands tools, planning loopers, and a Python Code Interpreter execution sandbox.

EDUCATION

Bachelor of Technology (Information Technology) — RCC Institute of Information Technology, Kolkata, India

2017/08 – 2021/07 | DGPA: 8.26

CERTIFICATES

- Google Cloud Certified: Professional Cloud DevOps Engineer

ACHIEVEMENTS

- 1st Runner-up, Marigold Global Hackathon (2025)
- Top Talent, FY-23, Persistent Systems
